a SIX company

SDX Web3 Staking Services

SDX Web3 is an integral part of the SIX Group and leverages high quality and mature services from both SIX Group and SIX Digital Exchange (SDX).

SDX Web3 non-custodial staking is a technology infrastructure solution allowing businesses to participate in secure, efficient, and cost-effective Ethereum non-custodial staking. The service is designed for institutional clients who need to scale their Ethereum staking capability.

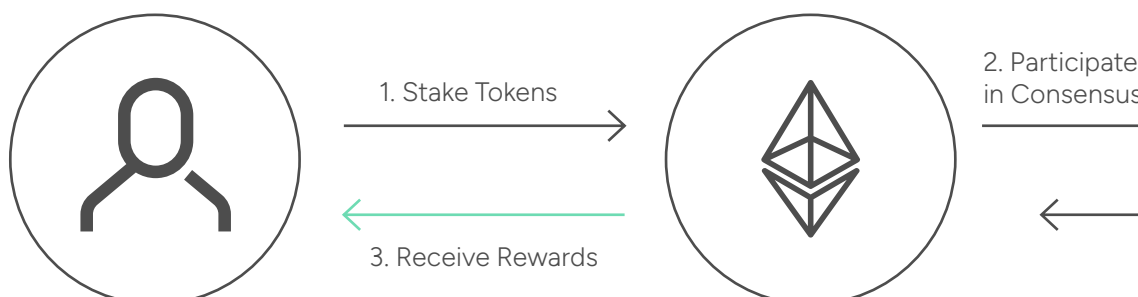

With a user-friendly and intuitive interface, SDX Web3 Staking makes it easy for businesses to participate in staking by eliminating the need for complex technical skills. Holders of ETH, the native token of Ethereum, can stake their ETH and participate in securing the network by locking up ETH in exchange for rewards.

SDX Web3 leverages services from SIX Group and SDX. Since 2021, SDX has been successfully operating digital financial market infrastructure for digital securities, overseen by FINMA licenses. As part of SIX, we adhere to high operational and security standards. We understand the importance of customer protection, a clear governance framework, and regulatory obligations in the digital asset space.

Unlock the Full Potential of Your Crypto Assets

Staking is an umbrella term used to denote the act of pledging your crypto assets to a cryptocurrency protocol to earn rewards in exchange. Staking allows users to participate in securing the network by locking up tokens.

The higher the amount of crypto assets you pledge, the higher the rewards you receive. The rewards are distributed on-chain, which means the process of earning these rewards is completely automatic.

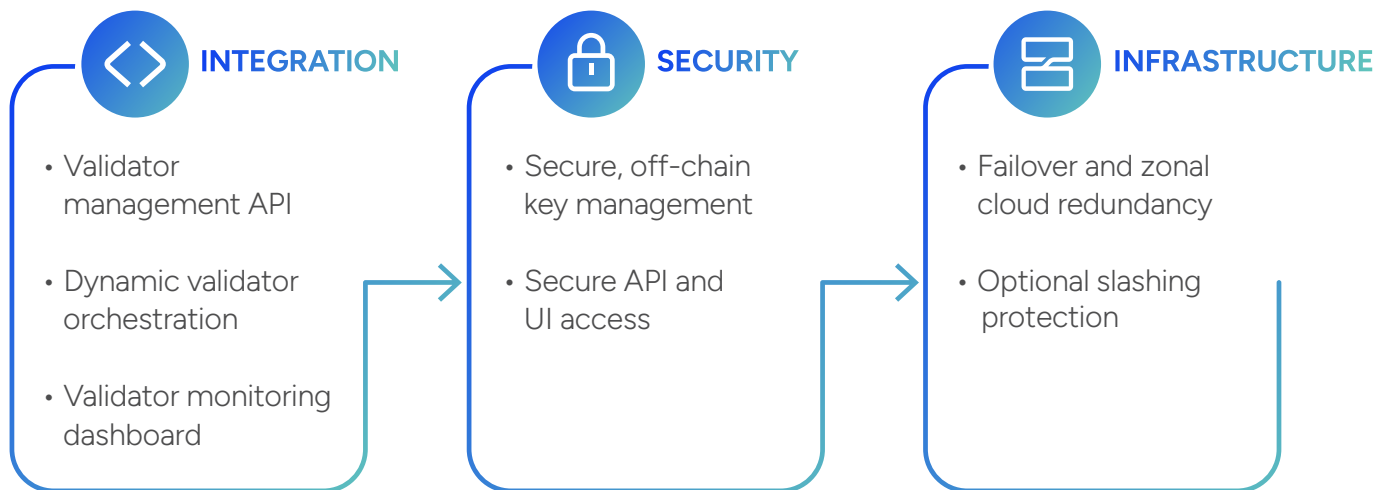

Every time a block is validated new tokens of that currency are minted and distributed as staking rewards. SDX's integration tools and experience operating in institutional markets give our clients easy access to Ethereum staking capabilities with high security and reliability standards.

A Product Tailored to Institutional Clients

Our product is designed for institutional clients who need to scale their own Ethereum staking capability.

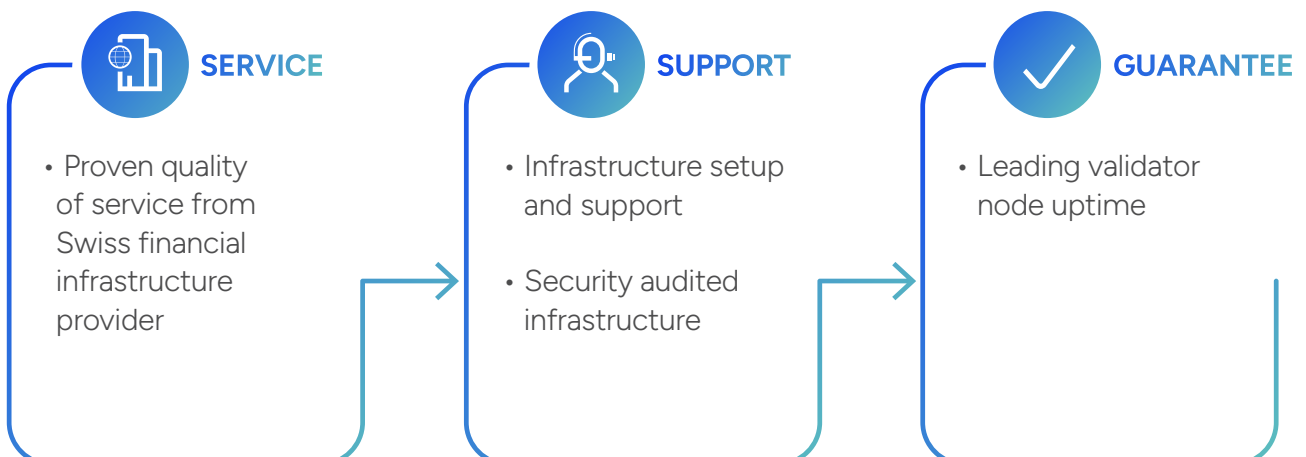

With an API capable of managing the entire staking process, institutional clients can create new validators, generate deposit contract transactions and monitor validator status in real-time.

Service and Support

Managing the Ethereum consensus layer infrastructure is complex and requires expert knowledge.

SDX Web3 abstracts away the complications of blockchain infrastructure management and provides best-in-class service and support.

Why Should you Select SDX Web3 for Ethereum Staking?

Swissness

Swiss partner understanding local regulations and banking requirements

- Full node infrastructure hosted in Switzerland
- Trusted counterparty and consolidated supervised as part of the SIX Group
- Legal contracts covered under Swiss law

Security & Stability

Highest security standard

- Failover and zonal cloud redundancy
- Security audited infrastructure and off-chain key management

Reward Maximation

Highest possible rewards for ETH staking

- Optional slashing protection and penalty mitigation
- Leading validator node uptime

Compliance

Regulation ready for staking

- Custody and full ownership of assets remains with SDX Web3 customers
- Enhanced functionality to ensure compliant transaction validation, etc.
